**Table 1 - COOLING**  
Continuous service

Wa (kW)	qmin (m <sup>3</sup> /min)	Δ P (Pa)*
1.3	1.6	160
1.7	2.1	250

\* 1 Pa ≈ 0,1 mm H<sub>2</sub>O

For intermittent service : see figure page 3

At higher altitudes and/or temperatures, a corresponding higher amount of air should be applied.

### RECOMMENDED COOLING DEVICE

(1) = metal housing

(2) = glass cylinder

(3) = socket 2422 511 05001

(4) = ground plate

Dimensions of the glass cylinder :

Height = 118 mm

Outside diameter = 150 mm

Inside diameter = 144 mm

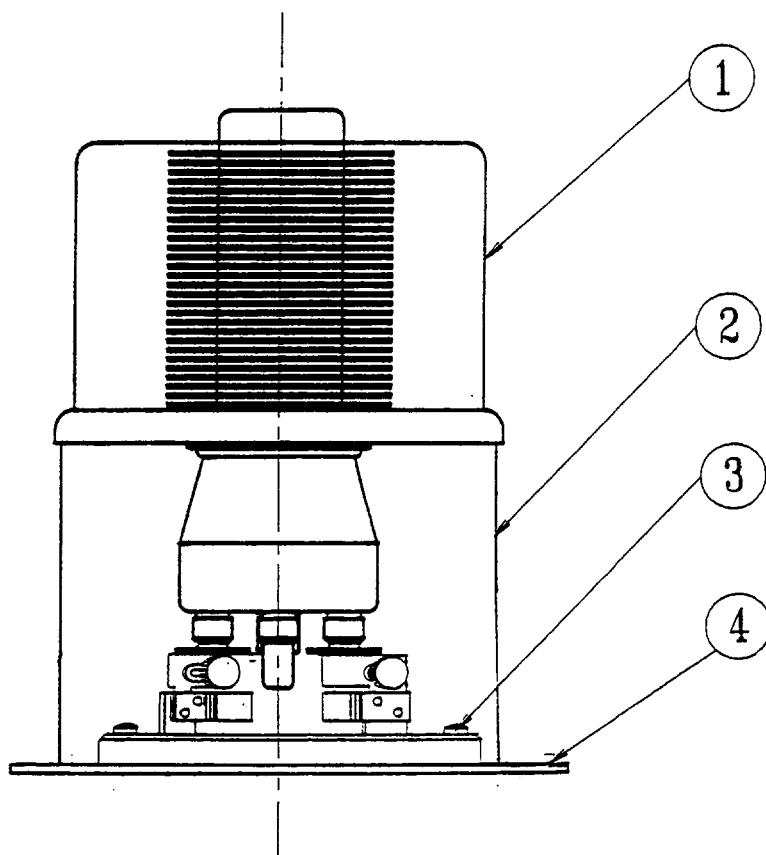

Fig. 1 - Recommended cooling device

The cooling air should preferably be supplied through the space under the ground plate (4). This ground plate should have holes of sufficient cross section to pass the required air flow.

The housing (1) should be connected to the anode connector. At frequencies above 4 MHz, both grid terminals should be connected in parallel. At the highest frequencies, care should be taken to distribute the RF current equally between both grid terminals to avoid excessive grid seal temperatures.
